SHARE Training Available!

We are pleased to announce that SHARE has completed our technical upgrade and has successfully migrated to our updated system. You may continue to access the system using the LOGIN button located in the top right corner of SHAREarkansas.com. Please note that you will be required to reset your password upon your first login.

To support you during this transition, we are offering additional training sessions. You can register using the QR Code above. If you prefer, you may also contact us directly at SHAREhealth@arkansas.gov for assistance.

SHARE also provides responsive technical support and is available to assist you.
Call: 855-SHAREAR
Email: ohit.support@arkansas.gov
Helpdesk: https://sharehelpdesk.hesk.com/

Thank you for your continued partnership and for the important work you do to support connected care across Arkansas. We appreciate your patience and collaboration as we complete this transition.

HIT News

Advancing Specialty Care Through SHARE HIE + American Oncology Network Integration

Arkansas is strengthening its specialty-care ecosystem through major interoperability milestones: SHARE, the state's health information exchange, has successfully integrated with Flatiron OncoEMR through the American Oncology Network (AON). This connection supports clinical data exchange for four key specialty organizations serving thousands of Arkansans:

- Genesis Cancer & Blood Institute – 10 locations
- Triple Crown Urology – 6 locations
- New Way Neurology
- Conway Hematology Oncology

This integration ensures that oncology, hematology, neurology, and urology providers have real-time access to critical patient information, improving care coordination for patients who often navigate multiple specialists, hospitals, and treatment settings. SHARE also makes the clinical results from each specialty practice available securely to the patient's care teams to include primary care, behavioral health, hospitals, and other practitioners in the patient's care journey. Connected providers and hospitals can then query SHARE for those records in their local EMR or access the patient's longitudinal patient results in the SHARE Virtual Health Record.

SHARE HIE provides access to the specialists' and care coordination teams including hospitalization alerts, lab and imaging results, discharge summaries, and updated medication histories. This eliminates information gaps that previously delayed treatment decisions or left providers unaware of care delivered outside their clinic.

For oncology and hematology practices, this visibility is especially vital. Cancer patients frequently experience urgent care needs, complications, or hospitalizations. With SHARE, providers at Genesis Cancer & Blood Institute receive daily hospitalization reports when their patients enter an emergency department or inpatient setting, enabling faster follow-up and safer transitions of care.

Neurology and urology specialists also benefit from a complete clinical picture, reducing duplicate testing, preventing medication conflicts, and ensuring that chronic and complex conditions are managed with full context.

"Connecting our Flatiron OncoEMR platform with Arkansas SHARE HIE is a significant advancement for the patients and providers we serve across the state," said Heather Doyle, Sr. Director of IT Projects and Applications at the American Oncology Network. "This level of interoperability ensures that our oncology and specialty practices have real-time access to critical clinical information, no matter where a patient receives care. By closing information gaps and strengthening care coordination, we are empowering our teams to deliver safer, faster, and more informed treatment for every Arkansan who depends on us."

Success Story

Community Quality Alliance & SHARE HIE Partnership Supporting Connected Healthcare in Arkansas

Community Quality Alliance (CQA), one of Arkansas's leading Clinically Integrated Networks (CINs), continues to strengthen care coordination and population health initiatives through its partnership with the Arkansas State Health Alliance for Records Exchange (SHARE HIE).

Representing more than 500 providers across 130 clinics and over 32 different electronic medical record systems, CQA works to improve quality outcomes, enhance care coordination, and support value-based care delivery throughout Arkansas. Through integration with SHARE HIE, CQA providers have access to timely, statewide clinical information that helps improve patient care across multiple healthcare settings.

Using SHARE HIE's interoperability network, CQA participating organizations receive real-time Admission, Discharge, and Transfer (ADT) alerts when attributed patients are seen in emergency departments, admitted to hospitals, or discharged from facilities across Arkansas within their analytical platform. These notifications allow care managers and providers to quickly intervene, coordinate follow-up care, reduce avoidable readmissions, and improve patient engagement after hospitalization.

Through SHARE HIE, Clinically Integrated Network (CIN) participants integrate a single connection from their electronic medical record (EMR) system into SHARE's statewide interoperability network, allowing clinical data to be securely shared across participating providers, hospitals, specialists, payers, and care management organizations. Rather than building and maintaining numerous costly point-to-point interfaces with individual organizations, CIN participants can leverage SHARE as a centralized interoperability hub. SHARE then delivers real-time Admission, Discharge, and Transfer (ADT) alerts and Continuity of Care Documents (CCDs) on attributed CIN patient populations to CQA CIN, helping providers improve care coordination, support value-based care initiatives, and enhance transitions of care. This model significantly reduces interface complexity and maintenance costs while improving statewide data exchange, clinical visibility, and interoperability across diverse EMR platforms and healthcare organizations.

"Partnering with SHARE HIE has allowed CQA to scale interoperability across our Clinically Integrated Network in a way that would not be feasible through individual interfaces alone. By leveraging a single connection to SHARE, our participating providers can securely exchange critical patient information, receive real-time ADT alerts and CCDs, and improve care coordination across Arkansas. This approach not only reduces the cost and complexity of maintaining multiple interfaces, but also strengthens our ability to support value-based care initiatives and improve outcomes for the patients we serve." — Britni Hoyt, Director of Population Health, Community Quality Alliance (CQA)
