

# SHARE's Interoperability Hero Spotlight

DirectTrust recently announced the *Interoperability Hero Initiative*, where they recognize the efforts of organizations, teams, or individuals that strive for the advancement of interoperability. In April, SHARE was given the honor of #InteropHero status for being the state's Health Information Exchange (HIE) that brings interoperability and education to all corners of the state. We at SHARE are very honored to receive this title.

## SHARE's Updated Website

Have you seen it yet? SHARE's website got a facelift with some exciting new features! Head over and check it out today [www.sharearkansas.com](http://www.sharearkansas.com)

Website now accepting online payments via e-check, credit card, or debit card!

## SHARE HIE Can Assist Clinicians with MIPS Objective Measures

On November 2nd, 2021, the Centers for Medicare and Medicaid Services (CMS) issued the Final Rule for the 2022 Medicare Physician Fee Schedule (PFS) which includes several changes to the Quality Payment Program (QPP). The Rule makes significant revisions to the existing MIPS program and outlines a timeframe for transitioning to the new Medicare's Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs). Here are the key takeaways that are related to using SHARE, your only statewide health information exchange.

There are two objective options related to health information exchange

### Option 1

*Support Electronic Referral Loops by Sending Health Information*

The MIPS eligible clinician can utilize SHARE's Secured Messaging to share and receive a summary of care records with the referral healthcare provider or healthcare setting.

### Option 2

*Health Information Exchange (HIE) Bi-Directional Exchange*

The MIPS eligible clinician that are fully integrated with SHARE can attest they engage in bi-directional exchange with the HIE. If you need an attestation letter of support, please contact us at [SHAREhealth@arkansas.gov](mailto:SHAREhealth@arkansas.gov)

Objectives	Measures	Maximum Points	Measurement
Health Information Exchange (OPTION 1)	Support Electronic Referral Loops by Sending Health Information	20 Points	Performance
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	20 Points	Performance
Health Information Exchange (OPTION 2)	Health Information Exchange (HIE) Bi-Directional Exchange	40 Points	Attestation

**Please note:** To receive any points in the PI category, you must submit numerator and denominator data for EVERY required measure to claim an exclusion, where applicable. More information on MIPS visit [www.qpp.cms.gov/mips/overview](http://www.qpp.cms.gov/mips/overview)

## Success Story

# SHARE connects to Forrester Davis Development Center's deTASO EMR

Forrester Davis Development Center in Clarksville, Arkansas provides services for developmentally delayed children, ages 6 weeks to five years. The center serves Johnson, Franklin, and Logan counties. Forrester Davis Development Center has been a part of the Clarksville community for many years. Their children's department serves children 6 weeks of age to school age that are developmentally delayed or disabled.

Forrester Davis Development Center integrated their deTASO Electronic Medical Records (EMR) system with SHARE and sends real-time clinical data as progress notes. Forrester Davis Development Center also receives hospitalization reports and COVID-19 positive reports of their children. By viewing their patients' health records in the SHARE web portal, also called the Virtual Health Record (VHR), Forrester Davis Development Center knows when one of their children, including high-risk patients, are receiving treatment in other SHARE connected clinics. In addition, the staff knows, on a daily basis, when

They have therapists on-site and contract from other agencies to ensure our children have the best-related services possible.

*"SHARE has assisted us by identifying emergency department visits and inpatient stays of our children when they go to hospitals connected to SHARE including Arkansas Children's Hospital and St. Mary's Regional Health System." Joy Wilson - Administrator of Forrester-Davis Development Center*

patients are hospitalized or visit the Emergency Department (ED). This is a game-changer for the center, which did not have this information to manage their children before connecting to SHARE. Now, the center can connect the guardians of the children to make sure they are doing okay after a hospitalization. Joy Wilson said that the center uses SHARE's Secure Messaging and the VHR to identify ED and in-patient stays with other healthcare providers in the region and to access historical data on current and new children they are serving. The centers' integration with SHARE successfully provides true interoperability for this development center.
